-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 May 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114.

Applicant's submission filed on 5/8/07 has been entered.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gill et al. (6113637) in view of McGahan et al. (WO 01/62191). Gill et al. disclose (Fig. 1a) a spinal implant with two baseplates (**22,24**) that articulate. Gill also shows (Figs. 14a,15a) a manipulation tool to deliver the implant to the spinal space with the distal end including a wedge-shaped extension **84**. It can be seen (Figs. 11,12) that the baseplates include recessed corners (**40,62**). Fig. 17 shows the manipulation tool engages the recessed corners. However, Gill et al. fail to disclose the corresponding implant surfaces and tool engaging surfaces as being angled. It is noted in Fig. 14b that Gill shows the corresponding surfaces match. McGahan et al. illustrates (Fig. 15b) a spinal orthopedic set with a spinal implant

Art Unit: 3738

10 with angled perimeter surfaces having a central flat surface **22** flanked by two flat corner perimeter surfaces **18**, **26** that correspond to the angled distal end of the tool having central surface **128** and two flanked flat surfaces **126**, **130** to engage the implant. McGahan teaches that angled perimeter flat surfaces are provided to prevent rotation of the implant when inserting with the tool, page 12, lines 21-24. McGahan shows (Figs. 10,13,20a,21a,26) a wedge-shaped extension projection from the distal end of the manipulation tool. Regarding claims 9,10,17,18 please note the intended use as set forth in the claims carries no weight in the absence of any distinguishing structure. It would have been obvious to one of ordinary skill in the art to modify the corresponding surfaces of the baseplates and tool to be angled as taught by McGahan et al. with the Gill implant system such that it prevents any sliding motion that may occur so the baseplate will not slip or move off the tool when inserting.

Response to Arguments

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.
